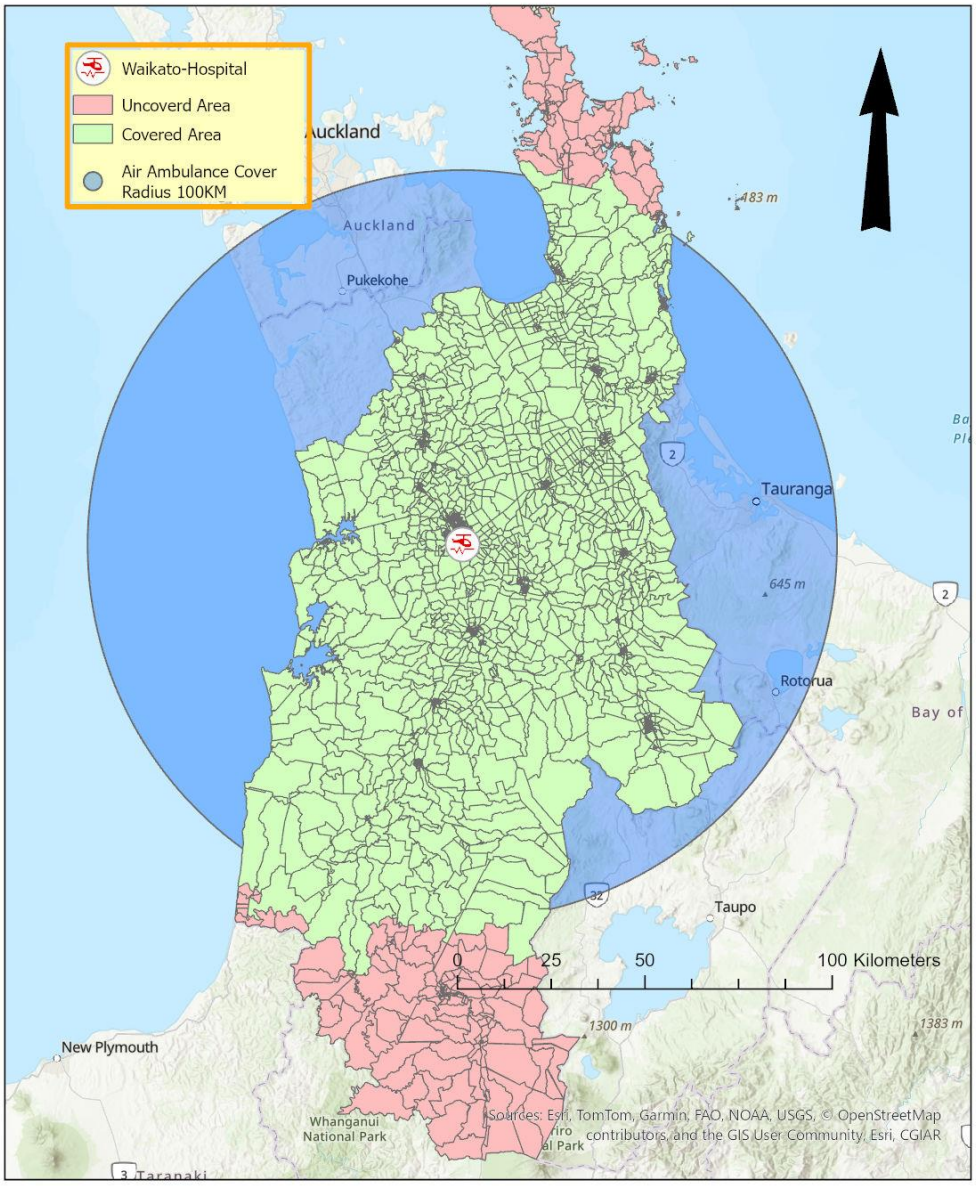
Lab2

Map and table:

Waikato Hospital Air Ambulance Covered Area and Population Info



Waikato Hospital Air Ambulance Service: Population Statistics

Service Status	Ward Counts	Total Number	Māori	Pacific Peoples	Other Ethnicities	Aged 65+	Aged 5-
Uncovered	395	20334	4710	285	15339	3048	1314
Coverd	3289	296919	59556	9207	228156	34542	22929

BIN HUANG

Lab exercise description:

1. Create a project, import Waikato hospital location, Waikato mesh block, import the population table.

2. Check or set the coordinate system to NZTM2000.

3. Create a 100km buffer area around the hospital.

4. Spatial join the Waikato mesh block and the 100km hospital buffer.

5. Table join population data to meshblocks based on MB_ID.

6. Export the joined data to create a new layer and drop unrelated data.

7. Summarize all demographic info based on whether it's covered by the 100km radius or not. Export the summarized data to Excel.

8. Symbolize the map layout, copy the Excel table to the Layout. Export to JPG.

Question:

- Spatial join: Join two datasets that have the same location.
- Table join: use a shared column/key which has the same data to join two datasets.
